(Fifth Edition)
(As on 1-3-1966)

FOREWORD

The Handbook of Indigenous Manufacturers of Engineering Stores was published for the first time in January, 1955. Subsequently the revised editions came out in January, 1957, January, 1961 and January, 1964. The present edition, which is the fifth in the series, represents an effort to keep the Handbook up-to-date. As in the preceding editions, capacities of the licensed units wherever available, have been indicated in this issue as well. The names of the firms that make products according to I.S.I. specifications have also been brought out prominently.

Since the publication of the last edition of this Handbook there has been a very substantial increase in the volume and the range of the engineering products manufactured in the country. In view of the dwindling foreign exchange position it has become essential to conserve foreign exchange through import substitution by using indigenous products and cutting out imports wherever possible. This Handbook is expected to meet the need for an up-to-date reference book for industrial consumers for locating indigenous sources of supply for various engineering stores. Whenever some specific information is necessary, a reference may be made to the concerned Directorate in the Directorate General of Technical Development.
